

Peladow Calcium Chloride

Peladow Calcium Chloride Attributes:

Calcium chloride is an effective deicer, working at temperatures below most competing products. Is significantly more effective than sodium chloride because of its ability to extract moisture from its surroundings and to cause exothermic or heat generating reactions.

Icy sidewalks and parking lots require a high performance deicer that can burn through hard pack snow and ice.

Peladow Calcium Chloride pellets are highly effective at cold temperatures down to -25F.
